LITERATURE ON
TIMBER MEASUREMENT PROBLEMS
IN THE DOUGLAS-FIR REGION

a bibliography compiled by
David Bruce

PACIFIC NORTHWEST
Forest and Range Experiment Station
U.S. Department of Agriculture · Forest Service
Portland, Oregon 1968
FOREWORD

This bibliography on timber measurements was prepared as part of an analysis of measurement problems in the Douglas-fir region of Oregon and Washington. It includes publications on the subject of tree or log measurement in this region with the exception of taper, volume, and yield tables and some standard forestry texts that made no specific reference to regional measurement problems. It also includes many publications that describe measurement systems or problems elsewhere in the United States and Canada and a few foreign publications that cover subjects not located in the American literature. A subject matter index is given on pages 27 and 28.

Appreciation is expressed to Mrs. Edith E. Bailey for listing and verifying most of the references.

This bibliography on timber measurements includes publications on the subject of tree or log measurement in this region. It also includes many publications that describe measurement systems or problems elsewhere in the United States and Canada and a few foreign publications.
Headquarters for the PACIFIC NORTHWEST FOREST AND RANGE EXPERIMENT STATION is in Portland, Oregon. The Station's mission is to provide the scientific knowledge, technology, and alternatives for management, use, and protection of forest, range, and related environments for present and future generations. The area of research encompasses Alaska, Washington, and Oregon, with some projects including California, Hawaii, the Western States, or the Nation. Project headquarters are at:

- College, Alaska
- Juneau, Alaska
- Bend, Oregon
- Corvallis, Oregon
- La Grande, Oregon
- Portland, Oregon
- Roseburg, Oregon
- Olympia, Washington
- Seattle, Washington
- Wenatchee, Washington
The FOREST SERVICE of the U. S. Department of Agriculture is dedicated to the principle of multiple use management of the Nation's forest resources for sustained yields of wood, water, forage, wildlife, and recreation. Through forestry research, cooperation with the States and private forest owners, and management of the National Forests and National Grasslands, it strives — as directed by Congress — to provide increasingly greater service to a growing Nation.
